Отчёт по домашней работе

по курсу

«Разработка интернет-приложений»

Вебсервис на базе технологий: Python, Django, JS, MySQL

Исполнитель: студентка группы PT5-51

Галичий Д.А.

Преподаватель: Гапанюк Ю.Е.

Цель работы: разработать вебсервис на базе технологий: Python, Django, JS, MySQL.

Предметная область: субъект: пользователь, объект: фильм, отношение: отзыв.

"""lab6 URL Configuration
The `urlpatterns` list routes URLs to views. For more information please see:
   https://docs.djangoproject.com/en/1.11/topics/http/urls/
Examples:
Function views
   1. Add an import: from my app import views
   2. Add a URL to urlpatterns: url(r'^$', views.home, name='home')
Class-based views
   1. Add an import: from other_app.views import Home
   2. Add a URL to urlpatterns: url(r'\$', Home.as view(), name='home')
Including another URLconf
   1. Import the include() function: from django.conf.urls import url,
include
   2. Add a URL to urlpatterns: url(r'^blog/', include('blog.urls'))
from django.conf.urls import url, include
from django.contrib import admin
urlpatterns = [
   url(r'^admin/', admin.site.urls),
   url(r'^hw app/', include('lab6.apps.db app.urls')),
       Содержание файла «db_app\urls.py»:
